HACKATHON DEMO

RIS CON

SUPPLY CHAIN RISK COMMAND CENTER

Maritime & logistics signals → live probability → your footprint on a map.

LIVE SIGNALS

PROBABILITY

ENTERPRISE DATA

CursorHackathon · Vector-Devs

THE PROBLEM

- **No live link** — alerts & spreadsheets aren't tied to plants, suppliers, or in-transit goods.
  - EU: **~59,961** medium-sized manufacturers (50–249 employees), **2024** — Statista (stat. 1253133).
  - EU manufacturing: **~2.2 million** enterprises total (**2023**) — **Eurostat** (most are micro/small; mid-market = ICP).
  - Global **control-tower** market often quoted **~US$6.8–7.2B (2024–25)** → **~US$12.7B by 2035** — analyst summaries (e.g. WiseGuyReports / Industry Today).
- **How it's tackled today** — email chains, shared **Excel** risk registers, and siloed spreadsheets; **no** single live view across plants & suppliers.
  - **~24–48h** typical lag to align on exposure & action — manual handoffs, not live signals. **Kinaxis** research (**2024**): **83%** of supply chains **cannot** respond to disruptions within **24 hours**.
- **Large EU+US pool** — tens of thousands of addressable mid-market firms; multi-$B risk / visibility software TAMs.
  - **BMW** — **Connected Supply Chain Cockpit** for 40+ plants & real-time material visibility (public implementation case studies).
  - **Siemens** — **supply-chain control-tower** / end-to-end visibility software & white papers (industrial / CP&R).
  - **P&G**, **Merck**, **Castrol (BP)** — named **Kinaxis** customers for large-scale supply-chain planning & transparency (vendor case studies / press).

THE SOLUTION — RISCON

- **Our wedge** — **headline noise → portfolio-level risk** on one live board...
- **What Riscon is** — **Live supply-chain risk cockpit:** AI **classifies maritime & logistics news in real time**, **fuses** it with **your** plants, suppliers, and **fleet context**, and **streams probability** to the control-tower UI (**WebSockets** — not weekly Excel packs).
- **Customer gains** — why buyers care:
  - **Speed** — **same-day**, **site-aware** signals vs. **24–48h** email / spreadsheet coordination.
  - **Clarity** — **which plants & suppliers** are in the risk zone, not a **generic** news feed.
  - **Alignment** — **one map + dashboard** for **ops, procurement, leadership** — fewer crisis calls, faster decisions.
- **Proof in the demo** — **news → probability → map** in one screen · **Docker** microservices (Spring, React, agents) for **fast pilots**.

REVENUE · GO-TO-MARKET

- **Who buys**
  - VP Supply Chain / CPO / Head of Logistics; **3PLs / 4PLs** later for **white-label** risk views to shippers.
- **Pricing** — anchors (tune to ICP)
  - **~$25–75/user/mo** team tier **or ~$18k–60k/yr** platform for mid-market (10–50 sites) + minimums.
- **Economics** (illustrative)
  - **~$40k ACV**, **~75%** gross margin after cloud + LLM; **cap** AI usage; **<12 mo** CAC payback via inside sales + pilots.
- **First wins** — GTM
  - **Manufacturers** — intros via **VDMA / IHK / trade shows**; **30-day pilots**.
  - **3PL** partners — co-branded **shipper risk** widget.
  - **One public case** — “alert → action in minutes.” [EDIT: your distribution].

TEAM — VECTOR DEVS

- **Why we** — execution & team
  - **Vector Devs** — **3 developers**, **dream team**: **deep experience**, **rapid prototyping**, end-to-end ownership.
  - **Hackathon build:** full stack — agents, probability service, React dashboard, Docker — **delivered in 27.5 hours** (not slides only — **shipped**).
  - **Meet the team** (LinkedIn)
    - **Balaji Vengatesh M** — https://www.linkedin.com/in/balaji-vengatesh-m-3b871151/
    - **Sven Schmeckenbecher** — https://www.linkedin.com/in/sven-schmeckenbecher
    - **Sreekanth Kata** — https://www.linkedin.com/in/sreekanth-kata-3096471bb/

WHY NOW

- **Market + geopolitical urgency**
  - **Middle East / Iran tensions** — escalations have **raised maritime supply-chain risk** (e.g. **Strait of Hormuz** chokepoint, **war-risk insurance** & **freight** repricing, **carrier rerouting**). **Global trade & energy** flows get **scrutiny**; coverage in **Reuters**, **CNBC**, **Foreign Policy**, **Janes** (2025–26) shows **shipping** and **boards** treating disruption as **immediate**, not theoretical.
  - **Customer sensitivity** — teams need **live** visibility into **suppliers, lanes, and sites** when **geopolitical shocks** hit; **Excel + email** cannot keep pace. **Riscon** maps news → **probability** → **your** footprint.
  - **Tech window** — **LLM APIs** make real-time classification affordable; **resilience** budgets and **board** pressure are up; incumbents still aren't **map-first** — room for a **focused** control tower.
